MNIST database

Training set: 60,000 images and labels

Test set: 10,000 images and labels

The MNIST database (Modified National Institute of Standards and Technology database) is a large database of handwritten digits that is commonly used for training various image processing systems.

Code snippet

```python
import torch.nn as nn
import torch.nn.functional as F

class CNN(nn.Module):
    def __init__(self):
        super(CNN, self).__init__()
        self.conv1 = nn.Conv2d(in_channels=1, out_channels=64, kernel_size=3, stride=2, padding=1)
        self.conv2 = nn.Conv2d(in_channels=64, out_channels=128, kernel_size=3, stride=2, padding=1)
        self.conv3 = nn.Conv2d(in_channels=128, out_channels=256, kernel_size=3, stride=2, padding=1)
        self.fc = nn.Linear(in_features=4 * 4 * 256, out_features=10)

    def forward(self, x):
        x = F.relu(self.conv1(x))
        x = F.relu(self.conv2(x))
        x = F.relu(self.conv3(x))
        x = x.view(x.shape[0], -1)
        x = self.fc(x)
        return x

class MLP(nn.Module):
    def __init__(self):
        super(MLP, self).__init__()
        self.linear1 = nn.Linear(in_features=28 * 28, out_features=256)
        self.linear2 = nn.Linear(in_features=256, out_features=128)
        self.linear3 = nn.Linear(in_features=128, out_features=64)
        self.linear4 = nn.Linear(in_features=64, out_features=10)

    def forward(self, x):
        x = F.relu(self.linear1(x))
        x = F.relu(self.linear2(x))
        x = F.relu(self.linear3(x))
        x = self.linear4(x)
        return x
```

Practice

MNIST database

Training set: 60,000 images and labels

Test set: 10,000 images and labels

The MNIST database (Modified National Institute of Standards and Technology database) is a large database of handwritten digits that is commonly used for training various image processing systems.

Code snippet

```python
import torch.nn as nn

class Generator(nn.Module):
    def __init__(self):
        super(Generator, self).__init__()
        model = [nn.Linear(in_features=100, out_features=128), nn.ReLU(inplace=True)]
        model += [nn.Linear(in_features=128, out_features=256), nn.ReLU(inplace=True)]
        model += [nn.Linear(in_features=256, out_features=28 * 28), nn.Sigmoid()]
        self.model = nn.Sequential(*model)

        # "The generator nets used a mixture of rectifier linear activations and sigmoid activations, while the
        #  discriminator net used maxout activations." - Generative Adversarial Networks

    def forward(self, x):
        return self.model(x)

class Discriminator(nn.Module):
    def __init__(self):
        super(Discriminator, self).__init__()
        model = [Maxout(28 * 28, 256, dropout=False, k=5)]
        model += [Maxout(256, 128, dropout=True, k=5)]
        model += [nn.Linear(128, 1), nn.Sigmoid()]
        self.model = nn.Sequential(*model)

    def forward(self, x):
        return self.model(x)
```
